## IN THE CLAIMS

Please amend claims 4 and 49, as set forth below. The following is a listing of the claims and status indicators in accordance with 37 C.F.R. §1.121. This listing replaces all prior listings of claims.

- 1. (Previously Presented) A package comprising:
  - a flexible substrate comprising a polymeric transparent film;
  - an organic electronic device coupled to the transparent film;
  - a sealant coupled to the flexible substrate and disposed about the perimeter of the organic electronic device; and
  - a superstrate coupled directly to the sealant and disposed proximate to the organic electronic device, wherein the superstrate comprises a periphery adapted to wrap around the edges of the package.
- 2. (Previously Presented) The package, as set forth in claim 1, wherein the flexible substrate comprises a barrier coating.
- 3. (Previously Presented) The package, as set forth in claim 1, wherein the flexible substrate is a composite substrate comprising:
  - a first protective layer configured to resist abrasion;
  - a polymeric transparent film coupled to the first protective layer;
  - a barrier coating coupled to the transparent film; and
  - a second protective layer coupled to the barrier coating and configured to protect the transparent film from chemical attack[[h]] during fabrication.
- 4. (Currently Amended) The package, as set forth in claim 1, wherein the flexible substrate is a composite substrate comprising:
  - a first protective layer configured to resist abrasion;
  - a first polymeric transparent film coupled to the first protective layer;
  - a first barrier coating coupled to the first transparent film;
  - a second barrier coating coupled to the first barrier coating via an adhesive layer;

- a second polymeric transparent film coupled to the second barrier coating; and
- a second protective layer coupled to the <u>second polymeric transparent</u>

  <u>film barrier coating</u> and configured to protect the transparent film

  from chemical attack during fabrication.
- 5. (Original) The package, as set forth in claim 1, comprising a barrier coating coupled between the flexible substrate and the organic electronic device.
- 6. (Original) The package, as set forth in claim 1, wherein the organic electronic device comprises an organic light emitting diode.
- 7. (Original) The package, as set forth in claim 1, wherein the organic electronic device comprises an organic photovoltaic device.
- 8. (Original) The package, as set forth in claim 1, wherein the sealant comprises an adhesive material having a low permeability.
- 9. (Original) The package, as set forth in claim 1, wherein the sealant comprises a thickness that is greater than a thickness of the organic electronic device.
- 10. (Original) The package, as set forth in claim 1, wherein the superstrate comprises a metal foil.
  - 11. (Withdrawn) A package comprising:
    - a flexible substrate comprising a polymeric transparent film;
    - an organic electronic device coupled to the transparent film;
    - a sealant coupled to the transparent film and disposed about the perimeter of the organic electronic device; and
    - a superstrate coupled to the sealant and disposed proximate to the organic electronic device, wherein the superstrate comprises a periphery adapted to wrap around edges of the package such that

the periphery of the superstrate is coupled to a side of the flexible substrate opposite the organic electronic device.

- 12. (Withdrawn) The package, as set forth in claim 11, wherein the flexible substrate comprises the barrier coating.
- 13. (Withdrawn) The package, as set forth in claim 11, wherein the flexible substrate is a composite substrate comprising:
  - a first protective layer configured to resist abrasion;
  - a polymeric transparent film coupled to the first protective layer;
  - a barrier coating coupled to the transparent film; and
  - a second protective layer coupled to the barrier coating and configured to protect the transparent film from chemical attach during fabrication.
- 14. (Withdrawn) The package, as set forth in claim 11, wherein the flexible substrate is a composite substrate comprising:
  - a first protective layer configured to resist abrasion;
  - a first polymeric transparent film coupled to the first protective layer;
  - a first barrier coating coupled to the first transparent film;
  - a second barrier coating coupled to the first barrier coating via an adhesive layer;
  - a second polymeric transparent film coupled to the second barrier coating; and
  - a second protective layer coupled to the barrier coating and configured to protect the transparent film from chemical attach during fabrication.
- 15. (Withdrawn) The package, as set forth in claim 11, comprising a barrier coating coupled between the flexible substrate and the organic electronic device.
- 16. (Withdrawn) The package, as set forth in claim 11, wherein the organic electronic device comprises an organic light emitting diode.

- 17. (Withdrawn) The package, as set forth in claim 11, wherein the organic electronic device comprises an organic photovoltaic device.
- 18. (Withdrawn) The package, as set forth in claim 11, wherein the sealant comprises an adhesive material having a low permeability.
- 19. (Withdrawn) The package, as set forth in claim 11, wherein the sealant comprises a thickness that is greater than a thickness of the organic electronic device.
- 20. (Withdrawn) The package, as set forth in claim 11, wherein the superstrate comprises a metal foil.
- 21. (Withdrawn) The package, as set forth in claim 11, comprising a desiccant material disposed within pockets formed by wrapping the edges of the package with the superstrate.
  - 22. (Withdrawn) A package comprising:
    - a flexible substrate comprising a polymeric transparent film;
    - an organic electronic device coupled to the transparent film;
    - a sealant coupled to the transparent film and disposed about the perimeter of the organic electronic device;
    - a superstrate coupled to the sealant and disposed proximate the organic electronic device; and
    - an edge seal coupled to each of the flexible substrate and the superstrate and configured to hermetically seal peripheral edges of the package.
- 23. (Withdrawn) The package, as set forth in claim 22, wherein the flexible substrate comprises the barrier coating.
- 24. (Withdrawn) The package, as set forth in claim 22, wherein the flexible substrate is a composite substrate comprising:

- a first protective layer configured to resist abrasion;
- a polymeric transparent film coupled to the first protective layer;
- a barrier coating coupled to the transparent film; and
- a second protective layer coupled to the barrier coating and configured to protect the transparent film from chemical attach during fabrication.
- 25. (Withdrawn) The package, as set forth in claim 22, wherein the flexible substrate is a composite substrate comprising:
  - a first protective layer configured to resist abrasion;
  - a first polymeric transparent film coupled to the first protective layer;
  - a first barrier coating coupled to the first transparent film;
  - a second barrier coating coupled to the first barrier coating via an adhesive layer;
  - a second polymeric transparent film coupled to the second barrier coating; and
  - a second protective layer coupled to the barrier coating and configured to protect the transparent film from chemical attach during fabrication.
- 26. (Withdrawn) The package, as set forth in claim 22, comprising a barrier coating coupled between the flexible substrate and the organic electronic device.
- 27. (Withdrawn) The package, as set forth in claim 22, wherein the organic electronic device comprises an organic light emitting diode.
- 28. (Withdrawn) The package, as set forth in claim 22, wherein the organic electronic device comprises an organic photovoltaic device.
- 29. (Withdrawn) The package, as set forth in claim 22, wherein the sealant comprises an adhesive material having a low permeability.

- 30. (Withdrawn) The package, as set forth in claim 22, wherein the sealant comprises a thickness that is greater than a thickness of the organic electronic device.
- 31. (Withdrawn) The package, as set forth in claim 22, wherein the superstrate comprises a metal foil.
- 32. (Withdrawn) The package, as set forth in claim 22, comprising a desiccant material disposed within pockets formed by the edge seal.
- 33. (Withdrawn) The package, as set forth in claim 22, wherein the edge seal comprises a metal foil.

## 34 – 46. (Canceled)

- 47. (Previously Presented) A package comprising:
  - a flexible substrate comprising a polymeric transparent film;
  - an organic electronic device coupled to the transparent film;
  - a sealant coupled to the flexible substrate and disposed about the perimeter of the organic electronic device; and
  - a superstrate coupled directly to the sealant and disposed proximate to the organic electronic device, wherein the superstrate comprises at least one layer larger than the flexible substrate and a periphery adapted to wrap around the edges of the package.
- 48. (Previously Presented) The package, as set forth in claim 47, wherein the flexible substrate is a composite substrate comprising:
  - a first protective layer configured to resist abrasion;
  - a polymeric transparent film coupled to the first protective layer;
  - a barrier coating coupled to the transparent film; and
  - a second protective layer coupled to the barrier coating and configured to protect the transparent film from chemical attack during fabrication.

- 49. (Currently Amended) The package, as set forth in claim 47, wherein the flexible substrate is a composite substrate comprising:
  - a first protective layer configured to resist abrasion;
  - a first polymeric transparent film coupled to the first protective layer;
  - a first barrier coating coupled to the first transparent film;
  - a second barrier coating coupled to the first barrier coating via an adhesive layer;
  - a second polymeric transparent film coupled to the second barrier coating; and
  - a second protective layer coupled to the <u>second polymeric transparent</u>

    <u>film barrier coating</u> and configured to protect the transparent film from chemical attack during fabrication.
- 50. (Previously Presented) The package, as set forth in claim 47, wherein the superstrate comprises a metal foil.
